

CASE STUDY

Command & Control

Command and Control Container

GEM 360 designed and fabricated this 40' high cube container to be used as command and control for defense purposes. The unit can be powered from site utilities, if available, or is self-sustaining when powered from the onboard electrical generator. Critical systems are continuously powered via UPS.

Multiple personnel processes are supported by the use if partitioned work spaces with dedicated private office space also available.

The command center is fully insulated and climate controlled.

- 40' high cube container
- Partition Wall framing
- Prehung olid core doors with heavy duty stainless steel hardware
- R-13 Insulated walls and ceiling with Kemlite FRP finish
- Supply and install pull elbow for remote generator inlet
- Supply and install Conductor Package
- Supply and install LED light fixtures
- Receive and install HVAC Bard W30A1-A05A0Z Wall Mount Unit
- Supply and install workstations
